

# MESOCELL

## adipo treatment

MesoCell® anti-cellulite cream combines powerful active agents selected for their abilities to boost blood circulation, break down fat cells and combat water retention. MesoCell® accelerates the breakdown of fats and the regeneration of the connective tissue, reducing the oedema by enhancing circulation in the areas affected by cellulite. Its unique formula transforms adipocytes by tissue possessing fibroblastic characteristics and contractile properties and inhibits the appearance of new adipocytes through calcium flow regulation.

MesoCell® delivers the following specific benefits:

- ✓ Interrupts the fat production mechanism, helping to convert fatty tissue into connective tissue.
- ✓ Induces lipolysis, stimulating adipocytes to release fat for burning.
- ✓ Tones, tightens and strengthens the skin.
- ✓ Improves reabsorption of localized oedemas.
- ✓ Increases blood flow in areas where cellulite is present.

For optimal results MesoCell® is the indispensable cosmetic complement to your professional mesotherapy treatment.
